

**ABSTRACT OF THE DISCLOSURE**

5           A remote control multimedia content listing system for providing an updated  
content listing of various media within a remote control. The remote control  
multimedia content listing system includes a remote control having a housing, a  
display, a keypad, and an electronic system for receiving configuration data from a  
control station via a global computer network (e.g. Internet). The user may enter media  
10 information into the electronic system thereafter uploading the media information to the  
control station. The control station analyzes the uploaded media information and  
transmits the appropriate configuration data to properly configure the electronic system  
to provide a usable "guide" for the media. The user may also access a web site of the  
control station and manually enter the media information after which the control station  
15 sends the appropriate configuration data to the electronic system. The electronic  
system also preferably receives automatic updates of the configuration data when  
connected to the control station via the Internet for maintaining an updated multimedia  
listing.
